

Units of Area - The Two Systems

We use Units of Area to measure the size of a surface. They are very useful in our daily life. How we write the Units of Area is based on how we write the Units of Length. Before we learn more about them, let's introduce the two different systems that we most often use. Color the units that belong to the Metric System in **RED**, then color the units that belong to the US Standard System in **BLUE**.
