Foxes are mostly solitary, but sometimes they live with their family. Foxes are clever animals that hunt small animals like rabbits.

Elephants live in groups called herds. They help each other find food and water. Elephants use their trunks to pick up food and talk to each other.

Bears are solitary and like to live alone in the forest or on the mountains. Bears eat berries, fish, and other animals.

Name _____

Where Animals Live Part 2

Fish can live in groups called schools. Swimming together helps them stay safe. Fish have fins and tails to help them move quickly.

Ants live in big groups in their homes called colonies. They work together as a team. Ants carry food back to their nests to share with others.
