About Triceratops

The name Triceratops means “three horned face”. Triceratops was a large dinosaur that had three horns on its face to go with a large bony plate on its head. It had one small horn and two large horns and is sometimes compared to the modern day Rhinoceros. He was a herbivore which means he was a plant eater. Triceratops was as big as 30 feet long and 10 feet tall. Triceratops lived during the Cretaceous period, between 68 million and 65 million years ago.

Now see if you can answer the questions below about Triceratops:

What does a Triceratops eat?

Plants

Rocks

Meat
